

# ***STAR TREK***

## ***THE ANALYSIS***

***CREATED BY  
SATVIK KISHORE***

# RESEARCH QUESTIONS

- Are there differences in quality across directors?
- What are the differences in quality across four shows and their constituent seasons?
- Which characters were the most liked/disliked?

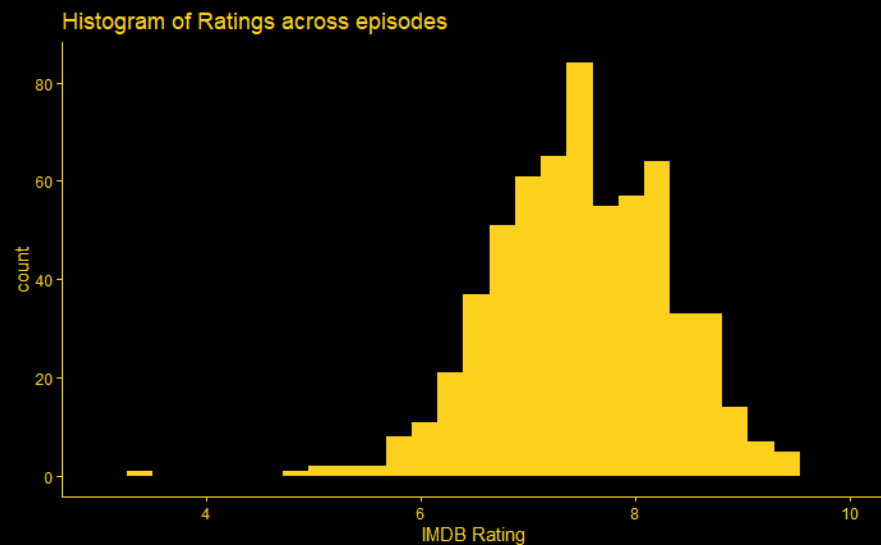

# DATA

TNG (1987-1994)		Seasons: 7 Episodes: 176	<div>SCRIPTS</div> <div>↓</div> <div>CHARACTER PROMINANCE</div>	Director	
DS9 (1993-1999)		Seasons: 7 Episodes: 173			
VOY (1995-2001)		Seasons: 7 Episodes: 168			
ENT (2001-2005)		Seasons: 5 Episodes: 97			

CHARACTER PROMINENCE = Percentage of words spoken by each main character within each episode

# EXPLORATORY DATA ANALYSIS

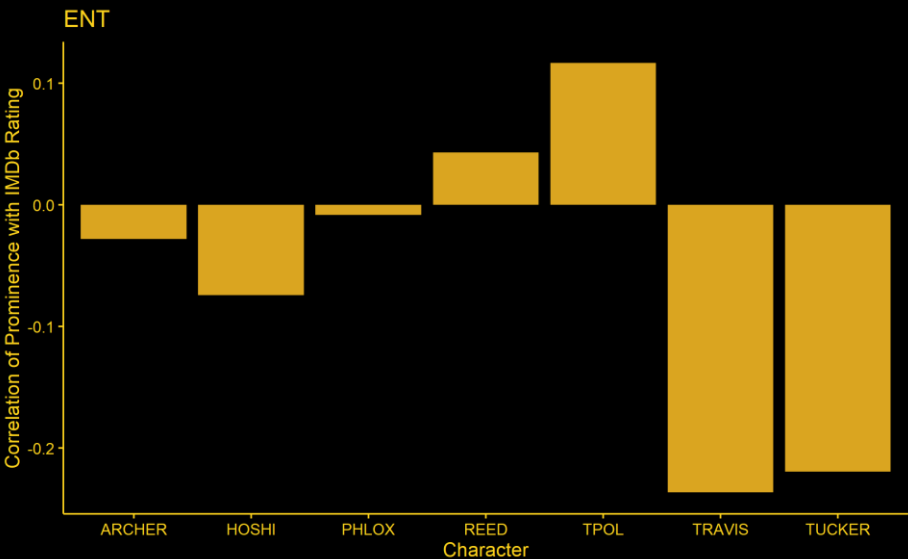

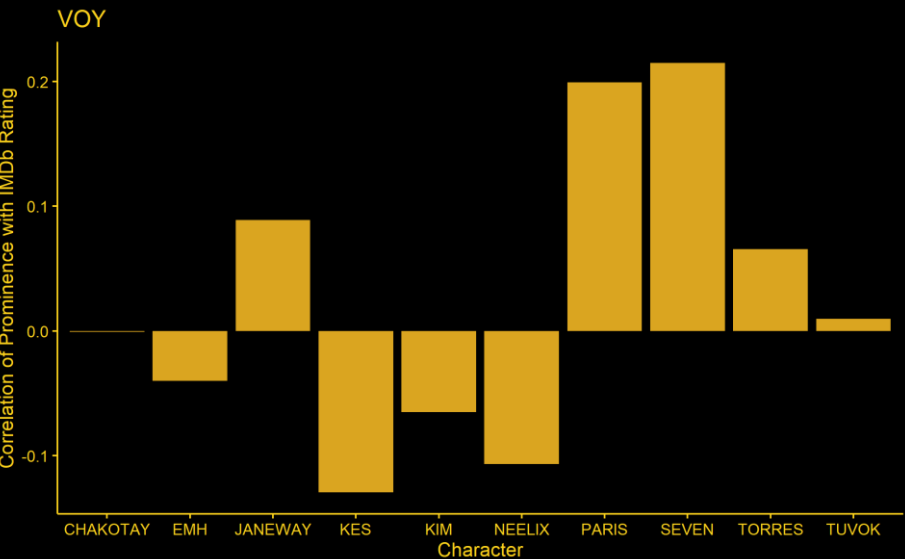

73 Unique Directors, with 33  
directing more than 4 episodes

# EXPLORATORY DATA ANALYSIS (cont.)

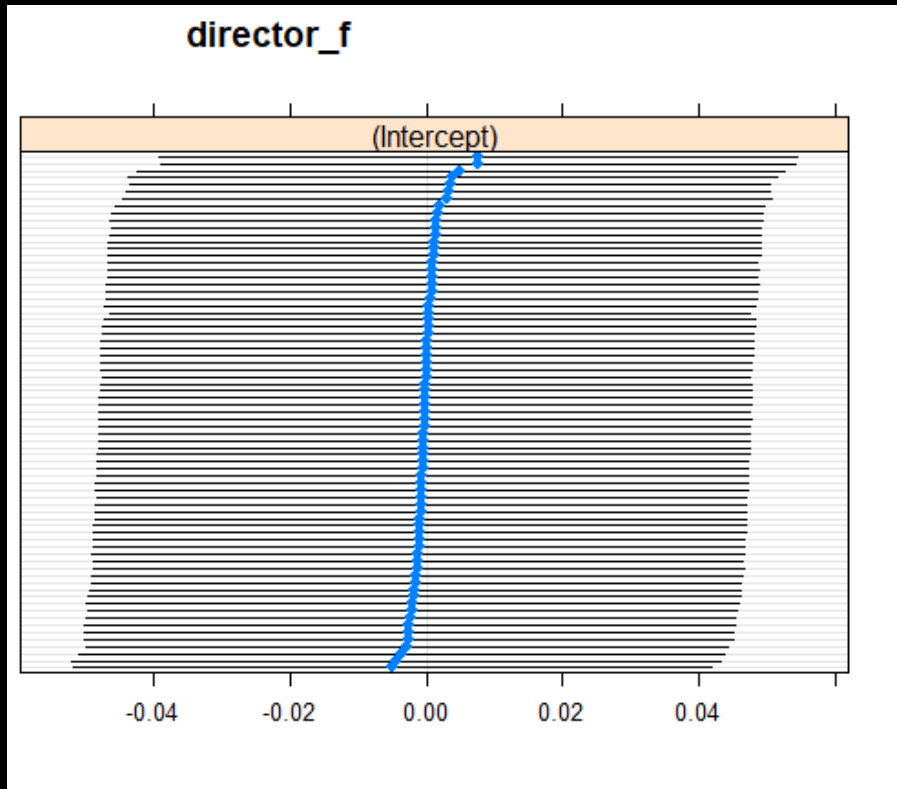

# EXPLORATORY DATA ANALYSIS (cont.)

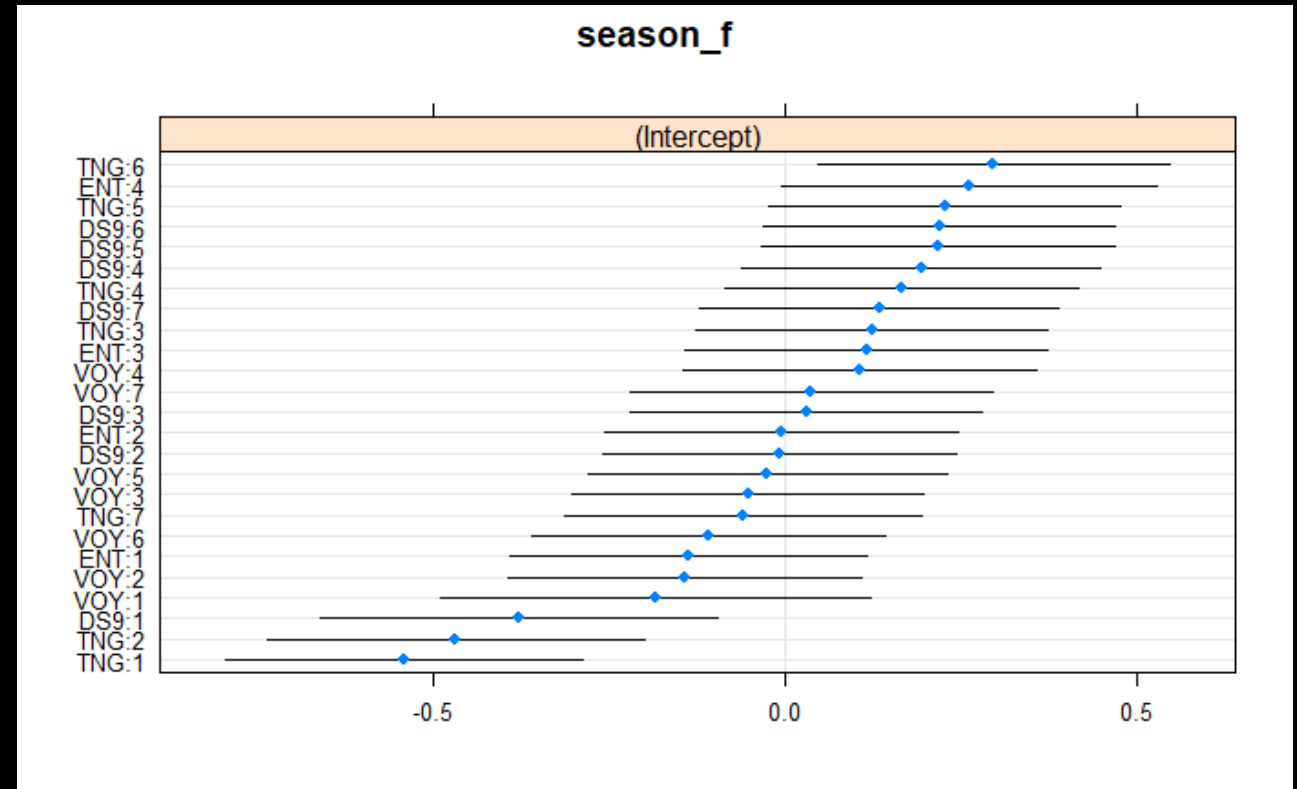

# FINAL MODEL

- Linear Hierarchical Model with levels as Show:Season and Director. The fixed effect covariates were the character prominence variables (33 in number)
- $y_{ijk} = \beta_0 + \beta_{0,j} + \beta_{0,k} + \sum_{p=1}^{33} \beta_p x_{p,i} + \epsilon_i$
- Where  $y$  is the IMDb rating,  $j$  is show:season,  $k$  is director,  $p$  is the index for cast prominence,  $\beta$  are the linear coefficients,  $x$  is the covariate for cast prominence, and  $\epsilon$  is the residual

# RESULTS: RANDOM EFFECTS

Variability Explained: 0.1%

Variability Explained: 11.75%

# RESULTS: FIXED EFFECTS

# CONCLUSIONS

- No significant difference in quality across directors was observed
- There are significant differences across seasons across shows
- Character prominence plays a large role in reception of the episodes

# LIMITATIONS

- Not enough data to observe differences in directors
- Unable to include writers in the analysis due to the nature of the data
